This problem set has a single question: what are the best possible, most cost-effective economic policies to reduce poverty over the next two decades in a specific part of the world?

In your answer - which should be 3 - 4 pages, double-spaced - you should:

- Be clear about the manifestations of poverty that you are addressing (e.g., girl’s education, clean water delivery) and where (e.g., the United States, South Asia, Central America).
- Build on the material in Chapters 18 - 20 in our Mankiw text and the Richard Wilkinson Ted Talk.
- Include at least four additional high-quality references.
- Show you ability to think like a compassionate economist!
