- 54lb
- (24.3kg)

**KIT-D2-120/2**
Diva-Lite 200 Kit, 120VAC
w/ Rolling Case

**KIT-D2-230/2**
Same as above for 230 voltage

**Kit Contents:**
- 2 Diva-Lite 200
- 2 Flozier, Full
- 1 Lamp Case
- 1 Rolling Ship Case

**Dimensions**
- 31.5 x 12.5 x 22”
- (80 x 32 x 56cm)

**Weight**
- 41lb
- (18.5kg)
Inserting Lamps

Position Lamp over Lamp holder.
Press lamp base down until it clicks into place.
Press lamp end into lamp clip.

Removing Lamps

Press red locking tab down and pull up on lamp.
Pull lamp out of lamp clip.

Warning!
Do Not lubricate the sliding lock mechanism on the lamp holder.

Applying Gel Frame and Louver

The Gel Frame is held to the Fixture with 4 Velcro straps.
The Louver is fastened to the Fixture with 4 Velcro straps.

A 180 degree turn is all that is required to loosen the mount for orientation.

To adjust the tension on the lock lever, pull handle away from mount. This disengages the handle from the screw mechanism and allows the lever to be reoriented. You can also use a screwdriver to adjust the tension. Pull back on handle and adjust screw.

Note:
When hanging in a studio, loop a safety cord through the strain-relief ring provided on the back of the fixture.

Mounted on a baby stand

Mounted to pipe grid
The Baby Offset Arm allows fixtures to mount on the center of a stand.

The Baby offset Arm can also be under slung from a baby stand to use as an up light.
Correct Lamp Orientation

**VERTICAL MODE:**
Follow the principle of lamp base up and lamp tip down. This orientation keeps the mercury away from the cathodes and provides best color temperature stability and best color rendering.

**DO NOT** operate fixtures with lamp base in the down position. Color can diverge up to 400K and will get very green.

**HORIZONTAL MODE:**
Even in the horizontal position a slight rotation favoring the lamp tips (lamp base higher than the lamp tip) will allow for better color temperature stability.
Warning! To Ensure Proper Operation
ALWAYS TURN OFF THE FIXTURE BEFORE connecting or disconnecting lamps. After the lamps are properly installed, the in-line switch can turn on the Ballast. Avoid operating in temperatures above 125°F (51°C) or below 60°F (15°C).

In temperatures below 60°F (15°C) the ballast may take longer to strike. If lamps do not strike within 5 seconds, switch the ballast to OFF, and try again. Check that the lamps are properly seated, set dimmer to Full and restrike. If temperatures are too low, try to warm up the fixture to at least 60°F. Lamps will turn on at preset dimmer settings as long as the temperature is above 60°F (15°C).

Trouble Shooting

LAMPS FAIL TO LIGHT:

- Check ambient temperature. Operating in temperatures above 125°F (51°C) or below 60°F (15°C) the unit might have trouble starting.
- With the power switch in the ON position, the red light should be on. If it is not, Voltage is not present. Check your power feed.
- The onboard dimmer should be full up. (Turned completely clockwise.)
- Check lamp contact. Lamps must be properly seated. If one lamp is not making contact or is burned out, two lamps will be off.
- Replace lamp or lamps.
- After having checked that lamps are correctly seated, turn off power to the fixture for 60 seconds and restart.
- Check that the lamp selector switch is in the appropriate setting.
MANUAL DIMMING CONTROL
The Dimmer should be full up when striking the lamp. Once the lamps have come up to full temperature, in about 3-5 minutes, then dim to the desired light level.

For full light output, turn dimmer fully clockwise.

An input jack for an optional Remote Dimmer (DIM-5) is located next to the power cord.

Dimming and Color Temperature Shift
Dimming can be used to adjust the light output of the Fixture. The color temperature will shift marginally if kept to within one f-stop. Dimming beyond one f-stop may result in a reduction of color temperature as well as a noticeable shift to magenta.

The Diva-Lite 400 Lamp Select Switch allows for 4 lamp or 2 lamp operation.

Turning off 2 lamps equals a one-stop reduction in light output without color shift. In the 4 Lamp position all lamps are on. In the 2 Lamp position only the two center lamps are on.

Note: This feature is not available for the Diva-Lite 200.
Remote Dimmer Operation

The Diva-Lite Dimmer (DIM-5) is designed to remotely dim Diva-Lite 400 and Diva-Lite 200 Fixture models, which have the REMOTE DIM feature. A 15ft Dimming Cable is supplied with the Dimmer.

Note: No batteries are required to operate the Dimmer. The power for the Dimmer is drawn from the Fixture.

Insert the other end of the Dimmer Cable into the Diva-Lite Remote Dimmer (DIM-5).

Insert the Dimmer Cable into the receptacle marked: REMOTE DIM.

Inserting the Dimmer Cable will automatically disable the onboard Dimmer.
