

Would you guess that:

A typical dinner at Proctor and Ross consisting of Chicken and Beef in the hot bar creates 4,770 to 10,290 lbs of CO₂

Which is equivalent to the CO₂ emitted by driving across the United States 1 to 3 times.

This carbon will cost the environment an estimated \$167 to \$338 dollars

Which is equivalent to buying 29 to 59 Doctor Feelgoods at the Middlebury Grille.
